# Macomb County Employees Retirement System 

## Actuarial Valuation Report

Plan Year<br>January 1, 2021 - December 31, 2021

September 2022

September 2022

The Retirement Commission<br>Macomb County Employees Retirement System<br>Mount Clemens, Michigan<br>Ladies and Gentlemen:

Macomb County retained Buck to complete this actuarial valuation of the Macomb County Employees Retirement System. This report summarizes the actuarial valuation results of Macomb County Employees Retirement System as of December 31, 2021.

## Purpose of This Report

Buck has prepared this report for Macomb County for use in review of the operation of the plan, including determining contributions to be made to the plan, and as a source of information for the financial statements of the plan. An actuarial valuation is performed on the retirement plan annually as of the beginning of the fiscal year. The main purposes of the actuarial valuation detailed in this report are:

1. To determine if the funding policy for the Retirement Plan is being met considering current assets and the current employer and member contribution rates; or determine the employer contribution necessary to meet the Commission's funding policy for the Plan;
2. To disclose the funding assets and liability measures as of the valuation date;
3. To review the current funded status of the Plan;
4. To compare actual and expected experience under the Plan during the last fiscal year;
5. And to report trends in contributions, assets, liabilities, and funded status over the last several years.

This actuarial valuation provides a "snapshot" of the funded position of the Retirement Plan based on the plan provisions, membership, assets, and actuarial assumptions as of the valuation date.

Use of this report for any other purpose may not be appropriate and may result in mistaken conclusions due to failure to understand applicable assumptions, methodologies, or inapplicability of the report for that purpose. Because of the risk of misinterpretation of actuarial results, Buck recommends requesting its advance review of any statement, document, or filing to be based on information contained in this report. Buck will accept no liability for any such statement, document or filing made without its prior review.
Future actuarial measurements may differ significantly from current measurements due to plan experience differing from that anticipated by the economic and demographic assumptions, increases or decreases expected as part of the natural operation of the methodology used for these measurements, and changes in plan provisions or applicable law. Because of limited scope, Buck performed no analysis of the potential range of such future differences.

## Data Used

The actuarial valuation is based on unaudited financial and member data provided by the staff of the Retirement System and summarized in this report. The benefits considered are those delineated in the plan as amended and restated effective December 31, 2015. The actuary did not verify the data submitted but did perform tests for consistency and reasonableness.

## Use of Models

Actuarial Standard of Practice No. 56 ("ASOP 56") provides guidance to actuaries when performing actuarial services with respect to designing, developing, selecting, modifying, using, reviewing, or evaluating models. Buck uses the following:

- third-party software in the performance of annual actuarial valuations and projections to calculate the liabilities associated with the provisions of the plan using data and assumptions as of the measurement date under the funding methods specified in this report.
- an internally developed model that applies applicable funding methods and policies to the liabilities derived from the output of the third-party software and other inputs, such as plan assets and contributions, to generate many of the exhibits found in this report
Buck has an extensive review process whereby the results of the liability calculations are checked using detailed sample output, changes from year to year are summarized by source, and significant deviations from expectations are investigated. Other outputs and the internal model are similarly reviewed in detail and at a high level for accuracy, reasonability and consistency with prior results. Buck also reviews the third-party model when significant changes are made to the software or model. The review is performed by experts within the company who are familiar with applicable funding methods as well as the manner in which the model generates its output. If significant changes are made to the internal model, extra checking and review are completed. Significant changes to the internal model that are applicable to multiple clients are generally developed, checked and reviewed by multiple experts within the company who are familiar with the details of the required changes.

## Assessment of Risks

Actuarial Standard of Practice No. 51 ("ASOP 51") applies to funding calculations such as those presented in this report and requires certain disclosures of potential risks. Section 6 of this report presents an assessment of the key risks applicable to this plan, as well as historical information and plan maturity measures.

## Assumptions and Methods

All costs, liabilities and other factors under the Plan were determined in accordance with actuarial principles and procedures adopted in accordance with the Actuarial Standards of Practice (ASOPs). An actuarial cost method is used to measure the actuarial liabilities which we believe is reasonable. Buck is solely responsible for the actuarial data and actuarial results presented in this report. This report fully and fairly discloses the actuarial position of the Plan.

In our opinion, the actuarial assumptions used are reasonable, taking into account the experience of the Plan and reasonable long-term expectations, and represent our best estimate of the anticipated long-term experience under the Plan. The actuary performs an analysis of Plan experience periodically and recommends changes if, in the opinion of the actuary, assumption changes are needed to more accurately reflect expected future experience.

Where presented, references to "funded ratio" and "unfunded accrued liability" typically are measured on an actuarial value of assets basis. It should be noted that the same measurements using market value of assets would result in different funded ratios and unfunded accrued liabilities. Moreover, the funded ratio presented is appropriate for evaluating the need and level of future contributions but makes no assessment regarding the funded status of the plan if the plan were to settle (i.e. purchase annuities) for a portion or all of its liabilities.

## Actuarial Certification

The undersigned are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained in this report. This report has been prepared in accordance with all Applicable Actuarial Standards of Practice and they are available to answer any questions on the material contained in the report, or to provide explanations or further details as may be appropriate.

Respectfully submitted,
Buck Global, LLC (Buck)

## Summary of Results

## Overview

The Macomb County Employees Retirement System provides pension and ancillary benefit payments to the terminated and retired employees of Macomb County, Michigan. A Retirement Commission comprised of employer, employee, and appointed representatives is responsible for administering the Plan and making investment decisions. This report presents the results of the actuarial valuation of the Employees Retirement System as of December 31, 2021.

## Membership

## Actives

As of December 31, 2021, there were 1,312 employees in active service covered under the provisions of the Plan not participating in DROP. The significant age, service, and salary information for these employees is summarized below, along with comparative figures from the last actuarial valuation one year earlier.

|  | December 31, 2021 | December 31, 2020 |
| :--- | ---: | ---: |
| Active participants |  |  |
| $\quad$ Number | 1,312 | 1,440 |
| Average age | 48.3 years | 47.7 years |
| Average service | 13.7 years | 13.0 years |
| Total annual valuation salary | $\$ 92,556,195$ | $\$ 93,922,408$ |
| Average annual salary | $\$$ | 70,546 |

The number of active members decreased by $8.9 \%$ from the previous valuation date as the plan is closed to the entrance of new members. The average age of the active members increased by 0.6 years and the average service increased 0.7 years. The total annual valuation salary decreased by $1.5 \%$ and the average salary increased by $8.2 \%$ from the previous valuation. There were 1,310 active members who were also reported active in the December 31, 2020 actuarial valuation. The total annual valuation salary for this group increased by $7.31 \%$ which was higher than the $3.70 \%$ increase we expected for the group.

Distributions of active members by age, service, and salary are given in Section 3.2. The salaries shown for active members are the annualized salaries reported, projected to the valuation year.

A schedule of active member data and reconciliation of the active membership from the previous year is shown in Sections 3.3 and 3.4.

In addition, there are 1,490 active employees (not included above) hired after December 31, 2015 earning vesting service to receive a $\$ 1,000$ lump sum benefit upon termination of employment.

## Inactives

In addition to the active members, there were 553 inactive members who did not elect to receive their accumulated contributions when they left covered employment. The significant age and annual benefit information for these inactive members are summarized below with comparative figures from the last actuarial valuation one year earlier.

|  | December 31, 2021 | December 31, 2020 |
| :--- | ---: | ---: | ---: |
| Terminated vested participants |  |  |
| Number | 289 | 285 |
| Average age | 51.6 years | 51.0 years |
| Average annual benefit payments | $\$ 13,784$ | $\$ 13,566$ |

The number of inactive vested members decreased by $1.4 \%$ from the previous valuation. The average age of the inactive vested members increased by 0.6 years. The Average Annual Pension Benefit for these members increased by $1.6 \%$ from the previous valuation.

| Non-vested participants owed refund | December 31, 2021 | December 31, 2020 |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
| $\quad$ Number |  | 264 |  |  |
| Average payoff amount | $\$$ | 2,329 | $\$$ | 2,423 |

The number of inactive non-vested members decreased by $2.2 \%$ from the previous valuation. The Average Refund Due for these members decreased by $3.9 \%$ from the previous valuation.

Distributions of inactive members by age and pension benefit are given in Section 3.6.

## Retirees and Beneficiaries

In addition to the active and inactive members, there were 2,432 retired members and 392 beneficiaries who are receiving monthly benefit payments on the valuation date. The significant age and annual benefit information for these members are summarized below with comparative figures from the last actuarial valuation performed one year earlier.

|  | December 31, 2021 | December 31, $\mathbf{2 0 2 0}$ |
| :--- | ---: | ---: | ---: |
| Retired participants |  |  |
| $\quad$ Number | 2,432 | 2,407 |
| Average Age | 70.1 years | 69.9 years |
| Average annual retirement benefits | $\$ \quad 22,710$ | $\$ 82,322$ |

## December 31, 2021 December 31, 2020

Survivors and beneficiaries of participants

| Number | 392 | 376 |
| :--- | ---: | ---: |
| Average Age | 72.9 years | 72.4 years |
| Average annual retirement benefits | $\$ \quad 15,707$ | $\$ \quad 15,712$ |

The number of retired members and beneficiaries increased by $1.5 \%$ from the previous valuation date. The average age of the retired members and beneficiaries increased by 0.2 years. The average annual benefit payments for these members increased by $1.4 \%$ from the previous valuation date.

Distributions of retired members by age and form of payment are given in Section 3.6 and 3.7.

## DROP Participants

In addition to the actives, inactives, and retirees, there were 260 DROP members who are receiving monthly benefit payments on the valuation date. The significant age and annual benefit information for these members are summarized below.

## December 31, 2021 December 31, 2020

DROP participants

| Number | 260 | 281 |  |
| :--- | ---: | ---: | ---: |
| Average Age | 58.0 years | 58.1 years |  |
| Average annual retirement benefits | $\$ 32,818$ | $\$$ | 30,749 |
| Average pay | $\$ \quad 68,251$ | $\$$ | 59,119 |

In our opinion, the membership data collected and prepared for use in this actuarial valuation meets the data quality standards required under Actuarial Standards of Practice No. 23.

## Plan Assets

The Plan's assets are held in trust and invested for the exclusive benefit of plan members. The trust is funded by member and employer contributions and pays benefits directly to eligible members in accordance with plan provisions. The assets are audited annually and are reported at fair value. On a fair value basis, the Plan has Net Assets Available for Benefits of $\$ 1,317.4$ million as of December 31, 2021. This includes an increase of $\$ 163.7$ million over the Net Assets Available for Benefits of $\$ 1,153.6$ million as of December 31, 2020. During the prior year, the fair value of assets experienced an investment rate of return of $19.49 \%$.

In order to reduce the volatility investment gains and losses can have on the Plan's actuarially required contribution and funded status, the Commission has adopted a five-year smoothing method to determine the actuarial value of assets used for funding purposes. This method recognizes gains and losses, i.e. the difference between actual investment return during the year and the expected return based on the valuation interest rate, on a level basis over a five-year period. In our opinion, this method complies with Actuarial Standards of Practice No. 44.

As of December 31, 2021, the assets available for benefits on an actuarial value basis was $\$ 1,142.2$ million. This includes an increase of $\$ 73.6$ million over the actuarial value of assets of $\$ 1,068.6$ million as of December 31, 2020. During the prior year, the actuarial value of assets experienced an actuarial rate of return of $12.42 \%$.

A summary of the assets held for investment, a summary of changes in assets, and the development of the actuarial value of assets is shown in Section 2.

## Actuarial Experience

Differences between the expected experience based on the actuarial assumptions and the actual experience create changes in the actuarial accrued liability, actuarial value of assets, and the unfunded actuarial accrued liability from one year to the next. These changes create an actuarial gain if the experience is favorable and an actuarial loss if the experience is unfavorable. The Plan experienced a total net actuarial gain of $\$ 42.4$ million during the prior year. This total net gain is about $4.0 \%$ of the plan's prior year actuarial accrued liability.

The demographic experience tracks actual changes in the plan's population compared to the assumptions for decrements such as mortality, turnover, and retirement, as well as pay increases. The Plan experienced a demographic loss of $\$ 13.2$ million during the year ending December 31, 2021. This loss increased the unfunded actuarial accrued liability by $\$ 13.2$ million and decreased the funded ratio by $1.3 \%$.

Continued tracking of the demographic experience is warranted in order to confirm the appropriateness of the actuarial assumptions. Details of the demographic, economic, and other assumptions used to value the plan liabilities and normal cost can be found in Section 6. In our opinion, the economic assumptions comply with Actuarial Standards of Practice No. 27 and the demographic assumptions comply with Actuarial Standards of Practice No. 35.

On the asset side, the Plan experienced a gain on an actuarial value of assets basis. The actual rate of return on the actuarial value of plan assets for the year ending December 31, 2021 was $12.42 \%$ compared to the assumption of $7.00 \%$, resulting in an asset gain of $\$ 55.6$ million. This gain decreased the unfunded actuarial accrued liability by $\$ 55.6$ million and increased the funded ratio by $5.1 \%$.

The rate of return on the fair value of assets for the year ending December 31, 2021 was consistent with the statement above. It was $19.49 \%$, which was higher than the assumed rate of $7.00 \%$. The actuarial value of the assets recognizes only $1 / 5$ of the 2021 gain on fair value, delaying the recognition of the remaining $4 / 5$ over the next four years. Moreover, the actuarial value of assets also recognizes deferred portions of prior years' gains and losses on fair value. It should be noted that the plan's assumed asset return of $7.00 \%$ is a long-term rate and short-term performance is not necessarily indicative of expected long-term future returns.

A summary of the actuarial gains and losses experienced during the prior year is shown in Section 1.3.

## Actuarial Contributions

Effective with the December 31, 2013 annual valuation, the Retirement Commission established a closed 20 -year amortization policy assuming $5.00 \%$ payment increases. For this valuation, the remaining period is 12 years.

The normal cost represents the cost of the benefits that accrue during the year for active members under the Entry Age Normal Actuarial Cost Method. It is determined as a level percentage of pay which, if paid from entry age to the assumed retirement age, assuming all the actuarial assumptions are exactly met by plan experience would accumulate to a fund sufficient to pay all benefits provided by the Plan. The expected member contributions are subtracted from this amount to determine the employer normal cost. The employer normal cost for 2022 has been determined to be $\$ 9.7$ million or $10.55 \%$ of pay.

The cost method also determines the actuarial accrued liability which represents the value of all accumulated past normal cost payments. This amount is compared to the actuarial value of assets to determine if the Plan is ahead or behind in funding as of the valuation date. The difference between the total actuarial accrued liability and the actuarial value of assets equals the amount of unfunded actuarial accrued liability or surplus (if negative) on the valuation date. This amount is amortized and added to the employer normal cost to determine the annual actuarially required employer contribution for the year.

The unfunded actuarial accrued liability as of December 31, 2021 is ( $\$ 52.8$ ) million. This represents a decrease of $\$ 48.7$ million in the unfunded actuarial accrued liability from last year's amount of (\$4.1) million.

The annual actuarially required employer contribution for 2023 is $\$ 5.7$ million, or $6.25 \%$ of pay. This represents a decrease of $\$ 4.2$ million in the employer contribution amount of $\$ 9.9$ million for 2022, or a decrease of $4.34 \%$ of pay from last year's employer contribution rate of $10.59 \%$.

The actuarial liabilities and development of the annual actuarial employer contribution is shown in Sections 1.1 and 1.2.

In our opinion, the measurement of the benefit obligations and determination of the actuarial cost of the Plan is performed in compliance with Actuarial Standards of Practice No. 4.

## Funded Status

The funded status is a measure of the progress that has been made in funding the plan as of the valuation date. It is determined as a ratio of the actuarial value of assets divided by the total actuarial accrued liability on the valuation date. A ratio of over 100\% represents a plan that is ahead in funding, and a ratio of less than 100\% represents a plan that is behind in funding on the valuation date.

As of December 31, 2021, the funded ratio of the Plan is $104.85 \%$. This represents an increase of $4.46 \%$ from last year's funded ratio of $100.39 \%$ as of December 31, 2020.

A history of the unfunded actuarial accrued liability and the funded ratio is shown in Section 1.5.

## Changes in Plan Provisions

There have been no changes in benefits or other plan provisions considered in this actuarial valuation since the last valuation performed as of December 31, 2020.

## Changes in Actuarial Assumptions, Methods, or Procedures

The actuarial assumptions and methods for funding purposes are the same as those used for the December 31, 2020 valuation report.

## Comparative Summary of Key Actuarial Valuation Results

Summary of Member Data

| Number of Members Included in the Valuation |  |  |
| :--- | ---: | ---: |
| Active Members | 1,312 | 1,440 |
| Terminated Vested Members | 289 | 285 |
| Non-vested Members Owed Refund | 264 | 270 |
| Retirees and Beneficiaries | 2,824 | 2,783 |
| DROP Participants | 260 | 281 |
| Total |  | 5,059 |
| Annual Payroll | 70,546 |  |
| Average (actual) |  | 65,224 |
| Annual Benefit Payments | 13,784 |  |
| Terminated Vested Members (Average) | 2,329 | 13,566 |
| Non-vested Member Refund (Average) | 21,732 | 2,423 |
| Retirees and beneficiaries (Average) | 32,818 | 21,432 |
| DROP Participants (Average) |  | 30,749 |

## Summary of Assets

| Fair Value | $1,317,355,983$ | $1,153,630,925$ |
| :--- | ---: | ---: |
| Rate of Return | $19.49 \%$ | $11.95 \%$ |
| Actuarial Value | $1,142,153,181$ | $1,068,574,127$ |
| Rate of Return | $12.42 \%$ | $10.10 \%$ |

## Summary of Liabilities

| Total Actuarial Accrued Liability | $1,089,306,972$ | $1,064,429,280$ |
| :--- | ---: | ---: |
| Actuarial Value of Assets | $1,142,153,181$ | $1,068,574,127$ |
| Unfunded Actuarial Accrued Liability | $(52,846,209)$ | $(4,144,847)$ |
| Funded Ratio | $104.85 \%$ | $100.39 \%$ |
| Maturity Ratio (See section 1.2) | $73.96 \%$ | $74.19 \%$ |

# Section 4 - Actuarial Assumptions, Methods and Additional Information for Funding 

Valuation Date

December 31, 2021

## Actuarial Methods

Actuarial Cost Method
Entry Age Normal

## Amortization Method

## Period

12 years remaining. Initially established as 20 years with the December 31, 2013 actuarial valuation
Open or Closed
Closed - each year the amortization period is reduced by 1 year

## Aggregate or Layered basis

Aggregate - the total unfunded actuarial accrued liability (UAAL) as of the valuation date is amortized over the remaining period

## UAAL Payment Increase

The UAAL payments are developed such that they would increase by $5.00 \%$ per year

## Asset Valuation Method

The Actuarial Value of Assets is based on a 5 year smoothing method and is determined by spreading each year's investment return in excess of or below the expected return.

## Actuarial Assumptions

The following assumptions were selected by the Board. The interest rate, inflation, decrements, salary increase, and DROP assumptions were updated based on a 2019 experience study. The remaining assumptions provided are from a 2005 experience study provided by the prior actuary. Each year, gains/losses are reviewed to determine if there is a need to revise these assumptions. In our professional judgment, the assumptions used for the measurements contained in this report do not significantly conflict with what we consider reasonable.

In the case of the Board's selection of the investment rate of return and inflation assumption, the signing actuary has used economic information and tools provided by Buck's Financial Risk Management ("FRM") practice. A spreadsheet tool created by the FRM team converts averages, standard deviations, and correlations from Buck's Capital Markets Assumptions ("CMA") that are used for stochastic forecasting into approximate percentile ranges for the arithmetic and geometric average returns. Percentiles are based on standard matrix multiplication and normal approximations. This simplified model (disclosed here under ASOP 56) ignores inter-period dependence and the skewed nature of single year returns. As such it is intended to suggest possible reasonable ranges for EROA without attempting to predict or select a specific best estimate rate of return. However, it does take into account the duration (horizon) of investment and the approximate allocation of assets in the portfolio to various
asset classes with different expected returns, standard deviations, and correlations to other asset classes. Under current calibrations, the EROA tool will tend to show higher expected returns for longer durations, and will show a greater divergence between arithmetic and geometric average returns the higher the standard deviation of portfolio return.

Based on the actuary's analysis, including consistency with other assumptions used in the valuation, and the percentiles generated by the spreadsheet described above, the actuary believes the EROA does not significantly conflict with what, in the actuary's professional judgment, is reasonable for the purpose of the measurement.

## Interest Rate and Inflation

| Investment Rate of Return | $7.00 \%$ |
| :--- | :--- |
| Inflation Assumption | $3.00 \%$ |

## Marriage Assumption

$100 \%$ of males and $100 \%$ of females are married, with males three years older than their female spouse.

## Expense Load for Contribution Amount

Previous year's administrative expense increased by the inflation assumption of $3.00 \%$ and allocated by employer payroll. Administrative expenses are allocated based on the ratio of beginning of year actuarial value of assets for the asset allocation between groups in Section 2.3.

## Participant Data

All census data used in these calculations was supplied by the employer.

## Section 4 - Actuarial Assumptions, Methods and Additional Information for Funding (continued)

## Retirement Rates

According to the following rates upon the attainment of retirement eligibility.

|  | General County | Martha T. Berry | Road Commission | Sheriff's Department |  |  |  |  |  |

## Section 4 - Actuarial Assumptions, Methods and Additional Information for Funding (continued)

## Disability Incidence

Sample rates of disability are shown in the following table:

| Age | Disability Rates <br> \% of Active Members <br> Becoming Disabled <br> within Next Year |
| :---: | :---: |
| 25 | $0.0675 \%$ |
| 30 | $0.0825 \%$ |
| 35 | $0.1125 \%$ |
| 40 | $0.1650 \%$ |
| 45 | $0.2700 \%$ |
| 50 | $0.4575 \%$ |
| 55 | $0.7575 \%$ |
| 60 | $1.2450 \%$ |

No disability rates are assumed before participants have attained 5 years of service.

## Termination Rates

Sample rates of active members separating service are shown in the following table:

| \% of Active Members Separating within Next Year |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sample Age | Years of Service | General <br> County | Sheriff's Department | Road Commission | Martha T Berry MCF |
| ALL | 0 | 11.00\% | 8.00\% | 6.50\% | 24.00\% |
|  | 1 | 11.00\% | 8.00\% | 6.00\% | 18.00\% |
|  | 2 | 8.00\% | 6.00\% | 5.50\% | 16.00\% |
|  | 3 | 7.00\% | 3.00\% | 5.00\% | 12.00\% |
|  | 4 | 6.00\% | 3.00\% | 4.50\% | 12.00\% |
| 25 | 5 \& Over | 11.60\% | 4.80\% | 5.00\% | 17.40\% |
| 30 |  | 10.60\% | 3.30\% | 4.00\% | 15.90\% |
| 35 |  | 8.60\% | 3.00\% | 4.00\% | 12.90\% |
| 40 |  | 6.60\% | 2.25\% | 3.00\% | 9.90\% |
| 45 |  | 4.60\% | 1.50\% | 2.00\% | 6.90\% |
| 50 |  | 3.60\% | 0.75\% | 1.00\% | 5.40\% |
| 55 |  | 3.50\% | 0.75\% | 1.00\% | 5.25\% |
| 60 |  | 3.00\% | 0.75\% | 1.00\% | 4.50\% |

## Section 4 - Actuarial Assumptions, Methods and Additional Information for Funding (continued)

## Mortality

RP-2014 (Base 2006) Mortality Tables adjusted by $105 \%$ for males and $110 \%$ for females, projected with Scale MP-2018 on a fully generational basis was used for Retired and Survivor members.
RP-2014 (Base 2006) Mortality Tables projected with Scale MP-2018 on a fully generational basis was used for Active and Deferred Vested members.
RP-2014 (Base 2006) Disabled Mortality Tables adjusted by $106 \%$ for males and $114 \%$ for females, projected with Scale MP-2018 on a fully generational basis was used for Disabled members.

The tables mentioned above were first used for the December 31, 2018 valuation. Sample values for retired participants are shown in the following table:

| Single Life Retirement Values <br> Sample <br> Ages |  |  |  |  |
| ---: | ---: | ---: | ---: | ---: |
| Values at Retirement of $\$ 1$ <br> Monthly for Life | Wuture Life Expectancy <br> (years) |  |  |  |
| 50 | $\$ 151.09$ | $\$ 154.99$ | Men | Women |

## Section 4 - Actuarial Assumptions, Methods and Additional Information for Funding (continued)

## DROP Assumptions

$75 \%$ of eligible participants are assumed to enter DROP and remain in DROP for 4 years.

## Salary Increase

Rates of salary increases are shown in the following table:

| Years of <br> Service | General <br> County | Sheriff's <br> Department | Road <br> Commission | Martha T <br> Berry MCF |
| ---: | ---: | ---: | ---: | ---: |
| 0 | $12.00 \%$ | $18.00 \%$ | $15.00 \%$ | $12.00 \%$ |
| 1 | $8.00 \%$ | $11.00 \%$ | $9.00 \%$ | $5.00 \%$ |
| 2 | $6.00 \%$ | $11.00 \%$ | $6.00 \%$ | $5.00 \%$ |
| 3 | $6.00 \%$ | $10.00 \%$ | $6.00 \%$ | $5.00 \%$ |
| 4 | $6.00 \%$ | $7.00 \%$ | $3.00 \%$ | $5.00 \%$ |
| 5 | $6.00 \%$ | $7.00 \%$ | $3.00 \%$ | $5.00 \%$ |
| 6 | $4.00 \%$ | $4.00 \%$ | $3.00 \%$ | $5.00 \%$ |
| 7 | $4.00 \%$ | $4.00 \%$ | $3.00 \%$ | $5.00 \%$ |
| 8 | $3.00 \%$ | $4.00 \%$ | $3.00 \%$ | $3.00 \%$ |
| 9 | $3.00 \%$ | $4.00 \%$ | $3.00 \%$ | $3.00 \%$ |
| 10 | $3.00 \%$ | $4.00 \%$ | $3.00 \%$ | $3.00 \%$ |
| $11+$ | $3.00 \%$ | $4.00 \%$ | $3.00 \%$ | $3.00 \%$ |

## Final Average Compensation Loads

| General County \& Martha T Berry | $4.50 \%$ |
| :--- | ---: |
| Road Commission | $6.00 \%$ |
| Sheriff's Department | $11.00 \%$ |
| Command (hired before 11/1/1996) | $1.00 \%$ |
| Correction Officers | $1.00 \%$ |
| Dispatchers | $0.00 \%$ |

This load on pay is to approximate the accumulated sick time leave that gets factored into final benefit calculations.

## Changes Since the Prior Valuation

The actuarial assumptions and methods for funding purposes are the same as those used for the December 31, 2020 valuation report.

## Section 5 - Summary of Plan Provisions

## Summary of DROP Provisions

Please refer to the Benefit Provision Summary for DROP eligibility provisions. The other provisions of the DROP are listed below:

- The DROP is a forward DROP.
- Members can DROP when they first become eligible for an unreduced benefit.
- Upon entering the DROP, $100 \%$ of the member's monthly retirement benefit will be credited to the DROP account.
- The DROP account will be credited with the same interest rate used to accumulate member contributions.
- The maximum DROP period is five years. Members may continue to work past the maximum DROP period, but no additional retirement benefits will be credited to the member's DROP account. Interest on the DROP account will continue to accrue for members working past the maximum DROP period.
- Member contributions to the Retirement System will cease upon entering the DROP.
- Upon actual retirement, the member would receive a monthly annuity equal to the accrued benefit credited to the DROP account under any form of payment available from the plan, and the lump sum amount accumulated in the DROP account. Members elect their form of payment at time of DROP.
- The monthly annuity as of the DROP date is calculated based on service, final average compensation and benefit provisions as of the DROP date less the annuity withdrawal reduction, if applicable; this amount is not changed for any subsequent changes in pay or benefit provisions. The annuity withdrawal is paid at the time of DROP.
- For POLC (Union 1 \& 20) and MCDPSA (Union 26), interest is earned on the DROP account balance at the end of each month and shall be paid to the employee's DROP account no later than the last day of the following month.
- For POLC (Union 1), effective August 20, 2010, for new entries into DROP, upon reaching the five-year maximum DROP participation period, the DROP participant shall terminate his/her employment.
- For POAM (Union 7), effective August 6, 2010, an employee of Macomb County who is a member of the POAM-Deputies and Dispatchers, may voluntarily elect to participate in the DROP, upon obtaining the minimum age and service requirements for a normal service retirement.

** Minimum Age 50

## Participation in the Plan

The Retirement System is closed to new entrants, effective December 31, 2015.

## Lump Sum Termination Benefit

At termination, participants hired on or after January 1, 2016 and have 5 years of service are eligible for a $\$ 1,000$ lump sum payment.

## Death Benefit

No age or service requirements:
Refund of accumulated contributions.
10 or more years of service:
Computed as laid out in the Benefit Provision Summary but actuarially reduced in accordance with a $100 \%$ joint and survivor election.

## Disability Benefit

Computed as laid out in the Benefit Provision Summary with a minimum benefit of $\$ 400$ per month.

## Employee Contributions

Employee contributions are accumulated at an annual interest rate of $3.50 \%$.

## Section 6 - ASOP 51 Disclosures

Funding future retirement benefits prior to when those benefits become due involves assumptions regarding future economic and demographic experience. These assumptions are applied to calculate actuarial liabilities, current contribution requirements and the funded status of the plan. However, to the extent future experience deviates from the assumptions used, variations will occur in these calculated values. These variations create risk to the plan. Understanding the risks to the funding of the plan is important. Actuarial Standard of Practice No. 51 ("ASOP 51") requires certain disclosures of potential risks to the plan and provides useful information for intended users of actuarial reports that determine plan contributions or evaluate the adequacy of specified contribution levels to support benefit provisions.

Under ASOP 51, risk is defined as the potential of actual future measurements deviating from expected future measurements resulting from actual future experience deviating from actuarially assumed experience.

It is important to note that not all risk is negative, but all risk should be understood and accepted based on knowledge, judgement and educated decisions. Future measurements may deviate in ways that produce positive or negative financial impacts to the plan.

In the actuary's professional judgment, the following risks may reasonably be anticipated to significantly affect the plan's future financial condition.

- Investment risk - potential that the investment return will be different than the $7.00 \%$ expected in the actuarial valuation
- Longevity risk - potential that participants live longer than expected from the valuation mortality assumptions
- Contribution risk - potential that the contribution will be different than the recommended contribution in the actuarial valuation

The following information is provided to comply with ASOP 51 and furnish beneficial information on potential risks to the plan. This list is not all-inclusive; it is an attempt to identify the most significant risks and how those risks might affect the results shown in this report.

## Section 6 - ASOP 51 Disclosures (continued)

Note that ASOP 51 does not require the actuary to evaluate the ability or willingness of the plan sponsor to make contributions to the plan when due, or to assess the likelihood or consequences of potential future changes in law. In addition, this valuation report is not intended to provide investment advice or to provide guidance on the management or reduction of risk. Buck welcomes the opportunity to assist in such matters as part of a separate project or projects utilizing the appropriate staff and resources for those objectives.

## Investment Risk

Plan costs are very sensitive to the market return. Any lower than assumed return on assets will increase costs:

- The lower market return will cause the market value of assets to be lower than expected.
- The plan uses an actuarial value of assets that smooths gains and losses on market returns over a five-year period to help control some of the volatility in costs due to investment risk.
- Past volatility of asset returns can be seen in Section 2.4 of this report.

## Longevity Risk

Plan costs will be increased as participants are expected to live longer. This is because:

- Benefits are paid over a longer lifetime when life expectancy is expected to increase. The longer duration of payments leads to higher liabilities.
- Health care has been improving which increases the life expectancy of participants. As health care improves, costs to the plan will increase.
- The mortality assumption for the Plan does assume future improvement in mortality. Any improvement in future mortality greater than that expected by the current mortality assumption would lead to increased costs for the Plan.

## Contribution Risk

There is a risk associated with the employer's contribution when the actual amount and recommended amount differ. This is because:

- When the actual contribution is lower than the recommended contribution the Plan may not be sustainable in the long term.
- Any underpayment of the contribution will increase future contribution amounts to help pay off the additional Unfunded Actuarial Accrued Liability associated with any lower than recommended contribution amounts.

## Section 6 - ASOP 51 Disclosures (continued)

## Plan Maturity Measures:

There are certain measures that may aid in understanding the significant risks to the plan.

| Ratio of Inactive Liability <br> to Total Liability | December 31, 2021 | December 31, 2020 | December 31, 2019 | December 31, 2018 | December 31, 2017 |
| :--- | ---: | ---: | ---: | ---: | :---: |
| 1. Inactive Member <br> Actuarial Accrued <br> Liability ${ }^{1}$ | $805,697,227$ | $789,719,875$ | $776,755,557$ | $755,474,838$ | $737,059,473$ |
| 2.Total Actuarial Accrued <br> Liability | $1,089,306,972$ | $1,064,429,280$ | $1,054,636,606$ | $1,034,282,157$ | $1,013,110,113$ |
| 3. Ratio [(1)/(2)] | $74.0 \%$ | $74.2 \%$ | $73.7 \%$ | $73.0 \%$ |  |

A mature plan will often have a ratio above 60-65 percent. An increasing percentage may indicate a need for a less risky asset allocation which may lead to a lower long-term return on assets assumption and increased costs. Due to the plan being closed to new entrants, this ratio is expected to grow over time and eventually equal 100\%.

| Ratio of Cash Flow to Assets | December 31, 2021 | December 31, 2020 | December 31, 2019 | December 31, 2018 | December 31, 2017 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1. Contributions | 18,575,320 | 18,289,162 | 20,346,143 | 26,999,720 | 25,124,450 |
| 2. Benefit Payments | 73,093,602 | 71,802,977 | 67,917,452 | 66,297,751 | 65,895,203 |
| 3. Cash Flow [(1) - (2)] | $(54,518,282)$ | $(53,513,815)$ | $(47,571,309)$ | $(39,298,031)$ | (40,770,753) |
| 4. Market Value of Assets | 1,317,355,983 | 1,153,630,925 | 1,082,041,799 | 937,087,932 | 1,037,372,865 |
| 5. Ratio [(3) / (4)] | (4.14\%) | (4.64\%) | (4.40\%) | (4.19\%) | (3.93\%) |

When this cash flow ratio is negative more cash is being paid out than deposited in the fund. Negative cash flow means the fund needs to rely on investment returns to cover benefit payments and at the same time may need to invest in more liquid assets to cover the benefit payments. More liquid assets may not garner the same returns as less liquid assets and therefore increase the investment risk. However, the low magnitude of the ratio implies there may already be enough liquid assets to cover the benefit payments, less investment return is needed to cover the shortfall, or only a small portion of assets will need to be converted to cash. Therefore, the investment risk is likely not amplified at this time. Due to the plan being closed to new entrants, this measure will grow increasingly negative as the plan moves toward wind down in the distant future.

[^5]
## Section 6 - ASOP 51 Disclosures (continued)

| Contribution Volatility | December 31, 2021 | December 31, 2020 | December 31, 2019 | December 31, 2018 | December 31, 2017 |
| ---: | ---: | ---: | ---: | ---: | ---: |
| 1. Market Value of Assets | $1,317,355,983$ | $1,153,630,925$ | $1,082,041,799$ | $993,087,932$ | $1,037,372,865$ |
| 2. Payroll | $92,556,195$ | $93,922,408$ | $101,650,261$ | $107,524,311$ | $112,878,234$ |
| 3. Asset Volatility Ratio (AVR) [(1)/(2)] | 14.23 | 12.28 | 10.64 | 8.72 |  |
| 4. Accrued Liability | $1,089,306,972$ | $1,064,429,280$ | $1,054,636,606$ | $1,034,282,157$ | $1,013,110,113$ |
| 5. Liability Volatility Ratio (LVR) [(4)/(2)] | 11.77 | 11.33 | 10.38 | 9.6 | 8 |

Plans that have higher asset-to-payroll ratios experience more volatile employer contributions (as a percentage of payroll) due to investment return. For example, a plan with an asset-to-payroll ratio of 10 may experience twice the contribution volatility due to investment return volatility than a plan with an asset-to-payroll ratio of 5 . Plans that have higher liability-to-payroll ratios experience more volatile employer contributions (as a percentage of payroll) due to changes in liability. For example, if an assumption change increases the liability of two plans by the same percent the plan with a liability-to-payroll ratio of 10 may experience twice the contribution volatility than a plan with a liability-to-payroll ratio of 5 .

## Glossary

## Actuarial Accrued Liability

Total accumulated cost to fund pension benefits arising from service in all prior years.

## Actuarial Cost Method

Technique used to assign or allocate, in a systematic and consistent manner, the expected cost of a pension plan for a group of plan members to the years of service that give rise to that cost.

## Actuarial Present Value of Future Benefits

Amount which, together with future interest, is expected to be sufficient to pay all future benefits.

## Actuarial Valuation

Study of probable amounts of future pension benefits and the necessary amount of contributions to fund those benefits.

## Actuary

Person who performs mathematical calculations pertaining to pension and insurance benefits based on specific procedures and assumptions.

## GASB 67

Governmental Accounting Standards Board Statement Number 67.

## Maturity Ratio

The ratio of the actuarial accrued liability for members who are no longer active to the total actuarial accrued liability. A ratio of over $50 \%$ indicates a mature plan. The higher the maturity ratio, the more volatile the contribution rate will be from year to year given actuarial gains and losses.

## Normal Cost

That portion of the actuarial present value of benefits assigned to a particular year in respect to an individual participant or the plan as a whole.

## Unfunded Actuarial Accrued Liability (UAAL)

The portion of the actuarial accrued liability not offset by plan assets.

[^0]:    ${ }^{1}$ Total employer contribution is a sum of the individual employer amounts and does not add up to the items above because one group is capped at $\$ 0$ rather than negative
    ${ }^{2}$ Closed 20-year period beginning with December 31, 2013 Valuation

[^1]:    ${ }^{1}$ Numbers may not add due to rounding.

[^2]:    ${ }^{1}$ Accrued liability for Active Member Contributions revised from prior year report to reflect a data selection refinement.

[^3]:    ${ }^{1}$ The rate of return is based on the change in the actuarial value of assets from last year to this year. The rate of return is calculated assuming contributions and disbursements occur halfway through the year.

[^4]:    ${ }^{1}$ The count as of $12 / 31 / 2021$ excludes 1,490 active participants who are eligible for Termination Benefit Only

[^5]:    ${ }^{1}$ Includes retirees, beneficiaries, DROP members, and terminated members with deferred benefits
